Specification

LATH SPECIFICATION

Laths

The Ra8 Punched and Glazed extruded aluminium lath. With 150mm w x 55m h spacing, providing up 22% vision.

Specification

BOX SPECIFICATION

Die cast Aluminium end plates with two piece roll formed Aluminium casing. The guide must be face fixed internally, behind the brickwork for the security rating.

Box Sizes

Guide height (excluding shutter box) - *(May change to on larger widths)*

1650 mm - 250mm box

26.00 mm - 300 mm box

4640 mm - 400 mm box

GUIDE RAIL SPECIFICATION

As standard the Ra8 comes with the Extruded Aluminium Guides with an integral box section for reinforcement and to facilitate fixing. The guide must be face fixed internally, behind the brickwork for the security rating.

Operation

The RA8 is available electrically operated using a tubular motor inside the barrel. The options priced are shown on your quotation which also shows the method of operation we have included. This list shows possible options which would incur different costs.

ELECTRIC - (N.B. minimum shutter width 755mm)

Electric shutters are usually fitted on larger openings where Manual Operation is not suitable or where the operator requires an easy, clean and user friendly type of operation. Single phase tubular motors are enclosed within the barrel giving full protection from the elements. Electric Roller Shutters can be controlled individually or grouped to one controller. The controllers available include internal rocker switch, security key switch or Remote Control. Manual overrides are available on Electric Roller Shutters which allow the shutter to be operated when the power to the shutter has failed.
